

EDUCATION

- **National Taiwan University (NTU)**

B.S. in Computer Science and Information Engineering

B.A. in Sociology

- Exchange student at KTH Royal Institute of Technology, Sweden (2022–2023).

Taipei, Taiwan

Sep. 2020 – Jun. 2025

Sep. 2021 – Jun. 2025

SUMMARY

Software engineer focused on backend systems and cloud infrastructure, with experience in building and operating large-scale production email security services handling 10M+ daily requests.

SKILLS

- **Languages:** C/C++, Python, Go, Java, Bash
- **Cloud & Infra:** AWS, GCP, Kubernetes, Terraform, Helm, Docker, GitHub Actions
- **Observability:** OpenTelemetry, Prometheus, Grafana, Langfuse

EXPERIENCE

- **Trend Micro**

Cloud Engineer

- Owned ongoing development and maintenance of Trend Micro Anti-Spam Engine (TMASE), a C++ email threat detection engine used across multiple email security products; implemented detection features for emerging threats, investigated customer escalations and production issues, managed monthly releases, and introduced GitHub Actions CI/CD pipelines to automate build, unit test, and regression workflows.
- Migrated AWS infrastructure from CloudFormation to Terraform and provisioned new Amazon EKS clusters with Helm; executed production traffic migration for services handling 10M+ daily email queries and optimized Kubernetes resource allocation and Karpenter autoscaling to improve cost efficiency.
- Integrated Prometheus metrics from Erato, an LLM-based email threat analysis service, into the OpenTelemetry observability pipeline and added client-source labeling for Grafana-based metric filtering.
- Built a Go web service exposing TMASE scanning capabilities to Erato, enabling rule-based detection results to be incorporated into the LLM evaluation pipeline.

Taipei, Taiwan

Jun. 2025 – Present

- **Thingnario**

Site Reliability Engineering Intern

- Built centralized testing and log collection workflows across GCP servers using Cronicle and Elasticsearch, improving failure diagnosis and operational troubleshooting.

Taipei, Taiwan

Jun. 2023 – Aug. 2023

- **Research Institutes of Sweden (RISE)**

Research Intern, supervised by Dr. Paris Carbone

- Dockerized and refactored Java benchmarking workloads for Apache Flink, Kafka Streams, and Spark Streaming to evaluate ML throughput in industrial stream-processing environments; work was later accepted at EDBT/ICDT 2024.

Stockholm, Sweden

Apr. 2023 – Jul. 2023

- **Mobagel**

Software Engineer Intern

- Developed error handling mechanisms for Decanter AI's Scala-based AutoML platform, improving visibility into failures during data processing, model training, and prediction workflows.
- Enhanced dataset sanitization components for uploaded data files, improving robustness and user experience.

Taipei, Taiwan

Jun. 2022 – Aug. 2022

PROJECTS / EARLIER EXPERIENCE

- Contract Software Engineer @ National Taiwan University (Apr. 2026 – Present): Built a Next.js-based course paper publication system for 80+ students at NTU Sociology, featuring a Markdown editor, teacher review workflow, and a Markdown-based publishing pipeline for rendering approved submissions into public-facing blog pages. [\[website\]](#)
- Machine Learning Intern @ Sensay (Jul. 2021 – Aug. 2021): Developed automated speech assessment and audio visualization components for an English learning platform.
- Deep Learning Intern @ Innoveon (Jul. 2020 – Sept. 2020): Implemented CNN-based image alignment algorithms for manufacturing defect detection.
- Research Project @ Academia Sinica, supervised by Dr. Li Su (Aug. 2018 – Jul. 2020): First-authored an ICASSP 2020 paper on neural network-based violin performance generation. [\[IEEEExplore\]](#)
